

# GlobalLogic Cloudwave® Accelerator

An application portfolio assessment tool that helps organizations migrate to the cloud quickly and securely

---

## Gain insights about your application portfolio in days, not months

---

Assessing an application portfolio for an IT change program such as cloud migration can be a logistical nightmare. Traditional configuration management databases (CMDBs) lack the contextual information required to make informed decisions, and application owners and subject matter experts are often too busy to help — resulting in project delays and overreaching budgets.

GlobalLogic's Cloudwave® assessment tool augments a business's CMDB with a unique, survey-based process to help businesses quickly and efficiently assess their application portfolios. By delivering insights into which applications deliver the most business value, Cloudwave® helps organizations determine which applications to prioritize, migrate, and retire. This enables businesses to establish a baseline, identify quick wins, and gain actionable insights into the overall change program at minimal cost.

### Improve Your Assessment Phase Efficiency

With Cloudwave®, you can reduce the costs and improve the efficiency of the assessment phase ahead of a cloud migration or large-scale IT change program — all while providing enterprise-grade data protection and security.

### Accelerate Your IT Change Program

With a simplified application assessment process and range of analytical tools at your fingertips, you gain insights about your portfolio in days, not months. This enables you to accelerate your IT change program securely.

### Consolidate All Your Data in One Place

By augmenting your CMDB with a specialized, intelligent categorization engine, you gain a complete picture of your application estate — all on a centralized dashboard.

# GlobalLogic Cloudwave® Accelerator

## How It Works

Easy to navigate and built on the best-in-class ServiceNow platform for ITSM, Cloudwave® delivers actionable insights. It draws on contextual factors, consolidating multiple data streams and identifying patterns and abnormalities in real-time. Results and recommendations show which applications deliver business value, enabling you to accurately determine which to prioritize, migrate, and retire.

### Key Features

#### Configurable Questionnaires

Use one of our existing questionnaires for Cloud, Containers, or Database Migration — or create your own.

#### Scalable & Enterprise-Ready

Scales to 1,000s of applications and 10,000s of users, so you can be confident it's enterprise ready.

#### Consolidated Application Insights

View assessment progress and portfolio readiness on an easy-to-use dashboard. Identify common themes, and group and categorize applications accordingly.

#### Multiple Deployment Options

Run Cloudwave® on your own ServiceNow instance or on GlobalLogic's Cloud platform — whatever works best for your business.

## Why Work with GlobalLogic

GlobalLogic has extensive experience getting the most out of IT infrastructures by applying the tools, processes, and people to meet the individual needs of each client. We provide a multi-level service to assist you on your application assessment journey. From setting up and running the application, to providing impartial recommendations, GlobalLogic can support you at every step.
